GEOG 4/5/7 9073: Environmental Analysis in R

Week 16: Course reflection and wrap-up

Dr. Bitterman

Reflection activity (3-5 min)

1. **WRITE DOWN** 2-3 things you can *now* do that you couldn't when the semester started
2. On the first day, you were asked what "success would look like" at the end of the semester. Were you successful?

Pair-and-share (find a buddy)

Share:

- your new skills
- your favorite thing about the course (e.g., new skills, activities, labs, demos)
- your measure of success *and* how well you did

Report out

From the syllabus (and labs)

- Basic R functions/processes/interfaces
- The tidyverse
- Data structures
- Plots
- VCS
- Functions
- Code reproducibility
- Point pattern analysis
- Spatial attribute analysis
- EDA

More

- Spatial operations
- Proximity analysis
- Queries
  - Tabular
  - Spatial
- Raster manipulation
- Raster math
- Autocorrelation
- Static maps
- Interactive maps
- Zonal statistics

And whatever you're doing for your projects...

(so, a LOT!)

Learning objectives (from the syllabus)

By the end of the term, students will be able to successfully:

- Demonstrate a familiarity with the R programming language in the context of geospatial analysis
- Write self-contained functions to automate geospatial tasks
- Analyze model workflows and describe computer code and algorithms in plain language
- Create small-scale programs that interface with web-based tools
- Practice good programming practices
- Plan, develop, and execute a programmatic analysis of a dataset

How did you do?
